We are pleased to provide the following clarification responses to questions received:

## 1 Ref: C1\_CJS2\_152b

### Question:

As we understand we can use a regional reanalysis as input to downscale our output high-resolution reanalysis model. Yet, what is the expected spatial extension of the output model, should it include all Europe too, or is it enough with just a small region (e.g. Catalonia and Andorra)? And what should be the minimum number of years present of the output reanalysis model (e.g. until 1989, 1979, etc.)?

### Answer:

The input for the regionalisation would be indeed either global or regional reanalysis and the target region is any domain over Europe (even a subdomain) for a climate period (at least 30 years or so). However, the present Request for Proposal is not focusing on the regionalisation work itself, but on the user support requirements related to such activities. The regionalisation support activity will be procured at a later stage, based on the results of the present procurement.
